

VitalSight™ by OMRON Healthcare

VitalSight™ is the **first remote patient monitoring service from OMRON Healthcare**. It is designed for hypertension management and developed to foster greater patient-to-physician connection and data sharing to improve treatment engagement and health outcomes.

- VitalSight is an **easy-to-use service** that physicians can use to enroll patients with high-risk levels of hypertension. Patients receive a kit delivered to their home that includes an **OMRON connected blood pressure monitor and data hub** that are pre-set to securely share measurements with the patient's physician and care team and do not require WiFi or separate cellular connection.
 - Patient coordinators assist patients with setting up their at-home VitalSight devices and proactively reach out to patients if data transmission drops off.
 - VitalSight can be integrated directly with the clinician's Electronic Medical Record (EMR) system or through the VitalSight Dashboard. **VitalSight sends automatic notifications through the EMR or VitalSight Dashboard** that signal when a patient has readings that require action to be taken.
 - VitalSight **improves access to care and greater hypertension management** for patients who live in underserved communities or have limited access to in-person care such as rural communities—a key part of OMRON's mission of **Going for Zero heart attacks and strokes**.
 - 116 million Americans are hypertensive. According to the CDC, 37 million U.S. adults have uncontrolled Stage 2 hypertension with a higher risk of heart attack and stroke. OMRON developed VitalSight to **provide more clinically relevant data to manage hypertension and improve patient outcomes**.
 - OMRON is **partnering with the most forward-thinking hospital systems and independent physicians in the U.S.**, including Northwestern Medicine in Chicago, to serve as an extension of their care teams and help streamline clinician workflow. Early feedback from physicians shows that VitalSight is quickly helping doctors improve patient engagement on their treatment plans.
 - VitalSight is available at little or no cost to patients depending on coverage and is reimbursable through Medicare.
