

## Viso, an OMRON Healthcare Remote Patient Monitoring Service

Viso, an OMRON Healthcare remote patient monitoring service, is a **mobile app and digital health service that enables a patient to work remotely with their physician** in order to manage common chronic conditions, including hypertension, AFib and diabetes.

- Launching in early 2023, Viso will be widely available throughout the U.K. Easy-to-use and intuitive for both user and clinician, **Viso represents the first step toward transforming how chronic care is managed in the U.K.**
- Even for early-diagnosed chronic conditions, **Viso is designed to boost the standard of care by building a better connection between the user and patient.** Medication decisions are communicated directly through the app, with automated reminders and a schedule of condition management actions also helping to keep the patient engaged.
- Viso offers a personalized approach and automated titration recommendations to allow for more monitoring and more data. This reduces the need for office visits and helps the patient make progress faster to reduce risk. **With Viso, physicians are afforded more time to focus on those patients facing higher health risks.**
- **Viso ensures that the physician remains in control of all remote patient care and integration with medical records systems,** such as Egton Medical Information Systems (EMIS) and SystemOne. Decisions taken within the platform are stored – safely and securely – in the patient record.
- To help support patients within their local populations, and advance meaningful change to how chronic care is managed in the U.K., **OMRON is partnering with forward-thinking clinical commissioning groups and physician practices** including Dorset, NorthWest London, and Frimley, as well as primary care networks independently commissioning Viso.

### About this Innovation

*“Viso by OMRON is easy to use, intuitive, and provides a personalized approach with automated titration recommendations to allow for more monitoring and more data. This reduces the need for office visits and helps the patient make progress faster. Viso helps the physician focus time on those facing the highest health risks,”* said Paul Stevens, OMRON Healthcare Europe director of digital health.
