The unit displays the total number of aerobic steps in a day that satisfies the following two conditions: (The total duration you walked as the number of aerobic steps is also displayed.)

- **Walk more than 60 steps per minute**
- **Walk for more than 10 minutes continuously**

Example: If you walk for 20 minutes at the speed of 120 steps per minute, the number of steady steps is 2400.

**NOTE:** Taking a rest for less than 1 minute during continuous walking for more than 10 minutes is considered as continuous walking.

## CALORIE DISPLAY

### Correction coefficient for calorie display

The calorie display indicates a calorie consumed by walking and calculated from the weight, stride distance, number of steps, and walking speed.

The calorie display increment is one minute. If you want to know the target calorie value, multiply the displayed calorie by the coefficient in the table shown below.

	Man	Woman
20's	1.10	1.07
30's	1.05	1.01
40's	1.02	.97
50's	1.01	.95
60's	1.00	.95
70's	.98	.96
80's	.95	.95

### Example of correction:

For a woman in her 50's with the calorie display of 300, the consumed calorie is calculated as follows.

$$300 \times 0.95 = 285 \text{ kcal}$$

# STRIDE LENGTH MEASUREMENT
