

## OMRON Connect App 2.0

**At CES 2021, OMRON is introducing new digital health tools to advance heart health education and boost patient-to-physician communication. The new OMRON Connect 2.0 mobile app will serve as a personal heart health coach with expanded insights and incentives for behavior change.**

- Our current apps, HeartAdvisor and our OMRON Connect app, will merge into OMRON Connect 2.0 later this year, vastly increasing the value of every OMRON connected blood pressure monitor. All OMRON connected devices, including HeartGuide and Complete, and our newly redesigned line of blood pressure monitors, will pair with OMRON Connect 2.0.
- The intuitive OMRON Connect 2.0 service is designed to foster patient-dialogue, advance heart health education, and provide personalized insights based on daily activities and lifestyle. Users can securely store their data, track it over time, and share it with a doctor.
- OMRON Connect 2.0 will include an option for users to sync data with the Apple Health and Google Fit platforms to integrate reports on heart health, activity levels and sleep quality.
- OMRON Connect 2.0 will offer a premium option, at an additional monthly fee, that will give users access to heart health report cards and rewards. Users can earn rewards through regular monitoring and behavior change.

**Availability:** Available for download on Apple iTunes and Google Play stores beginning Spring 2021
