

## Omron Blood Pressure Monitor + EKG™

The Omron Blood Pressure Monitor + EKG™ is the **first blood pressure monitor for home use in the U.S. that can also measure EKG**, providing a more complete heart health picture.

- Up to six million Americans have atrial fibrillation (AFib) – their stroke risk is five times higher. The Omron Blood Pressure Monitor + EKG has the unprecedented ability to **monitor two critical risk factors for stroke – AFib and high blood pressure – together at home with a single device.**
- The Omron Blood Pressure Monitor + EKG will be **FDA cleared** and clinically validated – making it a medical device – when it arrives for retail purchase in late 2018.
- Intuitive and user-friendly, it **syncs with the Omron Connect mobile app** to easily store, track and share more heart health data with your doctor for more insights, which lead to better treatment and better outcomes.
- Developed with AliveCor, the market leader in FDA-cleared home EKG technology.

### Device Specifications

Width: 231mm | Height: 98mm | Depth: 123mm | Weight: 1.2pounds (excluding batteries and cuff)

### Availability & MSRP

Available late 2018 (pending FDA clearance); MSRP to be announced at launch
