

Omron HeartGuide™

The Omron HeartGuide™ is the **first wearable oscillometric wrist blood pressure monitor**. Omron has worked to miniaturize a blood pressure monitor into a wristwatch, while ensuring accuracy that will be clinically-validated before it arrives for retail purchase.

- **Ultra-compact and stylish**, the wrist monitor will be the most **discreet and portable** blood pressure device Omron has ever developed.
- With significant **advancements in design, comfort and technology** since previewing the wearable prototype last year, Omron has filed **over 50 technology patents** on innovations never achieved before, including miniaturization of blood pressure components.
- The Omron HeartGuide will come in three sizes – S, M and L to ensure accuracy and provide **better fit and comfort**.
- Measures **daily activity, heart rate and sleep quality**, and will be able to be programmed to take a blood pressure reading while you sleep.
- Patented watch band was created using a flexible synthetic material five times stronger than steel, which allows the band to inflate when taking a reading while withstanding air pressure and maintaining its shape to ensure accurate measurement.
- Syncs via Bluetooth **with the Omron Connect app**, making it easy to **store, track and share** vital heart health data with healthcare providers.

Device Specifications

Diameter of face: 46mm | Band: 25mm | Thickness: 13.8mm

Availability & MSRP

Available late 2018 (pending FDA clearance); MSRP to be announced at launch
